

Retinal Photography Consent Form

Using a highly sophisticated, computer-assisted digital camera, Dr. Truong is able to conduct a very detailed analysis of your retina. During this process, nothing touches your eye, not even a puff of air!

Dr. Truong highly recommends that everyone has this analysis in order to establish a baseline. This gives her a valuable tool to use to evaluate any problems or issues that may arise later. She especially recommends this analysis for anyone with the following symptoms:

1. Macular Degeneration
2. Diabetes
3. High Blood Pressure
4. Family History of Glaucoma
5. Anyone taking a high number of prescription medications

Unfortunately, retinal photography is not covered by insurance at this time. However, we feel that a baseline retinal analysis is an important part of your vision care, therefore is offering this service at a \$25.00 fee. (If you have diabetes, you may be eligible for coverage through IEHP or VSP vision plan.)

Please indicate your preference below.

- Yes, I would like retinal photography analysis.
- No, I decline retinal photography analysis at this time.
